Lab Sheet Solutions

UAC012P — Adobe Photoshop Practicals

Questions / Task Requirements with Answers / Practical Steps

Prepared from the uploaded 7-page practical assignment

How to Use This PDF

The uploaded sheet contains six Photoshop practical tasks rather than written theory questions. For each practical, this document restates the task as a question and provides a step-by-step solution to complete it in Adobe Photoshop. Replace placeholders such as Your Name and Roll Number with your own details. The actual PSD/JPG/PNG files must be created in Photoshop; this PDF provides the answers and workflow, not fabricated practical outputs.

Practical 1 — Photoshop Interface and Basic Tools

Question: Create a 1200 × 800 px Photoshop document, explore the interface and basic tools, make a composition with at least three shapes and two colours, add your name, roll number and course, then save PSD and export JPG/PNG.

Answer / Procedure:

• Open Adobe Photoshop and choose File → New. Set Width = 1200 pixels, Height = 800 pixels, and create the document.

• Identify the Menu Bar, Options Bar, Toolbar, Layers Panel and Properties panel.

• Use the Shape Tool to draw at least three shapes (for example, a rectangle, circle and triangle) on separate layers. Apply at least two different fill colours.

• Use Move Tool to position shapes; Marquee/Lasso for selections; Brush and Eraser for simple edits; Crop to adjust the canvas if needed.

• Select the Type Tool (T) and add: Name: Your Name; Roll Number: Your Roll Number; Course: Desktop Publishing (UAC012P).

• Save the editable project using File → Save As → Photoshop (.PSD). Export a final image using File → Export → Export As, choosing JPG or PNG.

Required output files: Practical_01_Name_RollNo.psd and Practical_01_Name_RollNo.jpg

Practical 2 — Photo Editing and Basic Retouching

Question: Edit an ordinary photograph: crop and straighten it, adjust brightness/contrast and colour, remove at least three unwanted spots/objects, prepare before-and-after versions, and save the PSD plus final image.

Answer / Procedure:

• Open a photograph with File → Open. Duplicate the original layer (Ctrl+J) so the original remains untouched.

• Choose Crop Tool (C), straighten the horizon if required, adjust the crop boundary and press Enter.

• Use Image → Adjustments → Brightness/Contrast for a basic tonal correction. Use Image → Adjustments → Color Balance or Hue/Saturation to correct colour and saturation.

• Use Spot Healing Brush for small spots, Healing Brush for texture-aware repair, or Clone Stamp for copying pixels from a clean area. Remove at least three unwanted spots/objects.

• Keep an untouched original copy and an edited copy. Place them side-by-side in one document or export a separate before/after comparison image.

• Save as Practical_02_Name_RollNo.psd and export Practical_02_Name_RollNo.jpg plus Before_After_Practical_02.jpg.

Required output files: Practical_02_Name_RollNo.psd, Practical_02_Name_RollNo.jpg, Before_After_Practical_02.jpg

Practical 3 — Layers, Masks and Creative Composition

Question: Create a travel poster/composite from at least three photographs, use separate named layers and masks, add a background and text, apply a layer style, then save PSD and export the final composition.

Answer / Procedure:

• Create a new poster canvas. Open three suitable travel photographs and use the Move Tool or drag layers into the poster document.

• Rename each layer clearly (for example, Mountain, Person, Sky) and arrange their order in the Layers panel.

• Add a background colour or image beneath the photo layers.

• Select a photo layer and click Add Layer Mask. Paint black on the mask to hide parts and white to reveal parts, blending the photos together without permanently deleting pixels.

• Use Ctrl+T (Free Transform) to resize, rotate and position images. Add a title and supporting text with the Type Tool.

• Apply a Layer Style such as Drop Shadow, Stroke or Outer Glow to the title or a key object.

• Save the editable PSD and export a JPG/PNG final composition.

Required output files: Practical_03_Name_RollNo.psd and Practical_03_Name_RollNo.jpg

Practical 4 — Advanced Selection and Colour Correction

Question: Select a clear subject, refine its edges, create at least two adjustment layers, use a mask to control the adjustment, and present original and edited versions.

Answer / Procedure:

• Open a photograph with a clearly visible subject.

• Select the subject using Quick Selection, Magic Wand or Lasso. Use Select and Mask / Refine Edge to clean the outline.

• Add at least two adjustment layers, such as Brightness/Contrast and Hue/Saturation, or Levels and Color Balance.

• Use the selection to create or control the adjustment-layer mask so edits affect only the intended subject or background.

• Adjust brightness, contrast, levels, hue or saturation to achieve the desired correction. Keep the original layer for comparison.

• Arrange original and edited versions side-by-side, save Practical_04_Name_RollNo.psd, and export Practical_04_Name_RollNo.jpg.

Required output files: Practical_04_Name_RollNo.psd and Practical_04_Name_RollNo.jpg

Practical 5 — Filters, Custom Brushes and Blending Modes

Question: Create a 1200 × 800 px artwork with a background, apply two filters, use a custom brush, apply two blending modes and a layer style, add text, and export the final image.

Answer / Procedure:

• Create a 1200 × 800 px document and make a background using a colour, gradient or image.

• Keep design elements on separate layers. Apply at least two filters, for example Gaussian Blur and Noise, or Motion Blur and Camera Raw Filter where available.

• Load or create a custom brush and paint decorative elements on a separate layer.

• Create overlay layers and test blending modes such as Multiply, Screen, Overlay or Soft Light. Use at least two different modes.

• Apply a Layer Style such as Drop Shadow, Stroke or Outer Glow to a text or graphic layer.

• Add a clear title using the Type Tool and suitable typography. Save the PSD and export Practical_05_Name_RollNo.png (JPG is also acceptable in the task, but the listed required filename is PNG).

Required output files: Practical_05_Name_RollNo.psd and Practical_05_Name_RollNo.png

Practical 6 — Complete Promotional Poster

Question: Design a professional promotional poster for a hypothetical college event, workshop, hackathon, cultural fest or photography exhibition. Include event details and demonstrate all specified Photoshop techniques.

Answer / Sample poster content:

Event name: COER CREATIVE TECH FEST
Date & time: 20 November, 10:00 AM–4:00 PM
Venue: College Auditorium
Organizer: Department of Computer Science

Answer / Procedure:

• Create a poster canvas and place a suitable background plus relevant event/technology images.

• Use at least three meaningful layers, such as Background, Main Image, Event Title, Details and Decorative Effects.

• Use a Layer Mask to blend an image, an Adjustment Layer to correct colour, and Quick Selection/Lasso to isolate a subject.

• Apply at least one filter, one blending mode, one Layer Style and one custom brush or brush-based effect.

• Use strong typography and clear hierarchy for the event name, date/time, venue and organizer. Keep all layers named and organized.

• Save as Practical_06_Name_RollNo.psd and export Practical_06_Name_RollNo.jpg.

Required output files: Practical_06_Name_RollNo.psd and Practical_06_Name_RollNo.jpg

GitHub Submission — Questions and Answers

Question 7: What repository name and folder structure should be used?

Answer: Recommended repository name: Adobe-Photoshop-Practicals. Create a README.md at the root and folders Practical-01 through Practical-06. Put each practical's PSD, exported image and any required before/after image in its matching folder. Add a README.md describing the objective, tools used and output.

Question 8: How do you upload the practicals to GitHub?

• Sign in to GitHub and create a new repository named Adobe-Photoshop-Practicals.

• Choose visibility as instructed by faculty; use Public only if required.

• Create folders Practical-01 to Practical-06 and upload the matching PSD and JPG/PNG files.

• Add README.md files describing the objective, tools and output.

• Copy the repository URL and submit it through the prescribed LMS/ERP/Google Classroom portal.

Question 9: What should be done if a PSD file exceeds GitHub's normal file-size limit?

Answer: Use Git Large File Storage (Git LFS) as instructed by faculty/IT support instead of repeatedly attempting the same oversized upload.

Question 10: What should be checked before final submission?

• All six practical folders are present.

• PSD files and final JPG/PNG outputs are uploaded.

• README.md files are present where required.

• File names follow the prescribed naming convention.

• Repository link opens correctly with the required access.

• Final designs are visible, exported properly, and unrelated files are excluded.

• Layer names and PSD structure are organized, especially for Practicals 3–6.

• Repository URL has been submitted through the designated portal.

Question 11: What is the assessment pattern?

Practical	Main skills	Marks
01	Interface & Basic Tools	5
02	Photo Editing & Retouching	5
03	Layers & Masks	5
04	Selection & Colour Correction	5
05	Filters, Brushes & Effects	5
06	Integrated Photoshop Project	5
GitHub	Repository, README & File Organization	—
Total	**All Components**	**30**

Note: The source sheet lists six practical tasks. GitHub instructions, final checklist and assessment pattern are included as supporting submission questions because they are part of the uploaded lab sheet.
